

AYOOSH IYER

+91-9879123090 | Ahmedabad, India | github.com/ayoosh007 | ayooshiyer@gmail.com

SUMMARY

Computer Science student with experience building automation systems, AI-driven tools, trading analytics and full-stack back-ends. Demonstrated ability to rapidly prototype complex systems, integrate third-party APIs, optimize performance using C-level extensions, and ship production-grade tools.

TECHNICAL SKILLS

- Programming Languages: Python, C, JavaScript
- AI & ML: Whisper AI, Stable Diffusion, DeepSeek, LLM Function Calling, Dataset Annotation
- APIs: Gemini, DeepL, Binance, Telegram Bot, yFinance
- Systems & Concepts: REST APIs, DLL Integration, Performance Optimization, GUI Development

PROJECT EXPERIENCE

No-Code GUI Builder (In Progress) | Python, Tkinter

- Building a no-code desktop GUI generator enabling rapid creation of Tkinter-based applications.
- Focused on usability and fast prototyping for non-technical users.

AI-Powered Telegram Assistant | Python

- Built a Telegram bot integrating a distilled DeepSeek LLM with custom function-calling logic.
- Enabled dynamic image generation by routing user intent to Stable Diffusion models.
- Implemented local API server architecture for low-latency responses.

High-Performance Stock Technical Analysis Engine | C, Python

- Developed a full technical analysis engine with core mathematical logic implemented in C.
- Packaged the engine as a DLL and integrated it with Python using ctypes.
- Fetched live market data via yFinance, generated charts, indicators (< 5s), technical analysis (<1s)

Speech-to-Text REST API | Python, Django

- Designed and deployed a Django REST back-end hosting Whisper AI for speech-to-text transcription.
- Exposed scalable API endpoints for real-time and batch audio processing.

Cryptocurrency Arbitrage Trading System | Python

- Built automated arbitrage detectors for Coinswitch, WazirX, and Binance using live price feeds.
- Implemented manual trade confirmation logic and liquidity-awareness to prevent slippage.
- Analyzed cross-border BTC price spreads and evaluated regulatory and execution constraints.

Computer Vision Dataset Generator | Python

- Developed a dataset creation tool supporting frame-by-frame annotation and bounding box labeling.
- Integrated direct YouTube video ingestion and automated frame extraction.
- Designed to accelerate custom dataset creation for AI model fine-tuning.

University Portal Automation Suite | Python, Selenium

- Automated course registration and form interaction workflows on university portals.
- Built a tool to extract coding questions from exam portals and query Gemini API for solutions.

Manga Translation & Web Scraping Tools | Python, JavaScript

- Created a manga translation pipeline using DeepL API for automated text translation.
- Built custom JavaScript scripts to extract comic assets directly from browser cache.

EDUCATION

- B. Tech, Computer Science and Engineering (AI & ML), CGPA: 8.55, Vellore Institute of Technology 2028
- Class XII, 80% 2023
